

SUMMARY OF NO. 15-18

This proposed law would require retail electricity suppliers to increase the minimum percentage of electricity from designated renewable energy generating sources that they provide to end-use customers by 1% each year until December 31, 2019; then by an additional 2% each year until December 31, 2029; and by an additional 3% each year thereafter.

The proposed law would also amend the state's renewable and alternative energy and energy efficiency goals by requiring that at least 20% of the state's electric load requirements be met through new, renewable, and alternative energy generation by 2020; that 40% of the load be met through such sources by 2030; that 70% of the load be met through such sources by 2040, and that 100% of the load be met through such sources by 2050.
